Ben Nevis
For the first time in 11 years Ben Nevis is clear from snow.

Ben Nevis is the highest mountain in Britain.
RULES AND REGULATIONS

Adopted by the Local United States Food Administration for the season of 1918, pertaining to the harvest and threshing of grain.

RULE I.
That the local U. S. Food Administration deputize the man in charge of each threshing machine operating to act as their agent, to see that all ways and means be observed, so as to prevent the waste of grain in any manner.

RULE II.
It shall be in his power to direct all men who are work

RULE V.
It is also demanded of the managers of threshing machines to provide canvas, size not less than 10 x 14, to be put under the feeder of the machine and to avoid all leaks; and the men who are pitching to the machine must observe these rules:

1. That bundles must be pitched head first into the machine which is the correct way of feeding a machine. Also the bundles must be pitched at a uniform speed, and in no case pile them upon the feeder.
2. It is demanded by the Government that the fall wheat and rye shall be threshed first. Spring wheat to be threshed at time of threshing oats.
3. In regard to time for a day’s work, we would recommend that as the Government asks us to save all the grain possible, we think it advisable to use all the day time that is available and it shall be expected that the people will be loyal and work the best hours of the day; owing to the morning’s dampness and the difficulty in doing good work in the early morning, we would recommend that the hour of quitting shall not be before 7 p.m., new time.

RULE VI.
It shall be the duty of the machine man to avoid all waste for the following reasons:

A. Threshing grain when it is tough (damp and unripe.)
B. Loss from shattering in bundle wagons.
C. Carelessness in keeping threshing cylinder up to speed, and in adjustment of blower, etc., dull and bent teeth.
D. Carelessness in feeding bundles or loose grain into the machine.
E. Carelessness in allowing grain to leak on the ground around and under the machine and haste in cleaning up at close of operations.
F. Improper adjustment of concaves and other parts of machine.

RULE VII.—Pertaining to Farmers.
It shall be the duty of the farmer to see that all wagon boxes are tight. Also to see that there is no waste at the bins due from scooping at and the machine while changing the conveyors from one wagon to another. We will also recommend that if it is impossible to rake the wheat field before the finish of the wheat threshing; it be raked after, and threshed on the return of the machine for the oats threshing, also to see that no grain is left by the man who pitches on the shocks; “Always scrape up after each shock and pick up all bundles lost or dropped from wagons by the wayside.”

Every effort should be given with the object of getting the grain into proper channels of trade and not permit so great a percentage to be distributed upon the ground or into the straw pile to be fed later to the stock on the farm. The practice of overlooking the leaks with the excuse that the stock will get the benefit when turned in, should be discouraged this year, when no wheat should be fed to animals.

Suggestions and mention of instances where waste during threshing has occurred in the past will be appreciated.

We are all soldiers of the Home Guard fighting to win the war, and the first duty of a soldier is to obey orders.

Rule I.
That the local U. S. Food Administration deputize the man in charge of each threshing machine to act as their agent, to see that all ways and means be observed, so as to prevent the waste of grain in any manner.

Rule II.
It shall be the duty of all men who are working on threshing machines, to see that their machines are in perfect running order before he shall attempt to do any work on the machine. The men in charge of the threshing machines shall be responsible for the safe condition of the machine while it is in use. The men shall be required to keep the machine running correctly, and not allow bundles to be run over by teams and wagon; also it is recommended that they shall arrange to have a sufficient number of racks to haul bundles on, which will be built with tight floor and a 2 x 4 around edge for the express purpose to save grain.
