

Five good communication standards

Reasonable adjustments to communication that individuals with learning disability and/or autism should expect in specialist hospital and residential settings

Foreword

'Transforming Care: A national response to Winterbourne View Hospital'¹ found failings around how we care for people with learning disabilities and/or autism with complex needs. The report identifies outcomes for individuals with a learning disability and/or autism plus mental health conditions or behaviours described as challenging, who live in specialist hospital and residential settings. These include:

- Being safe.
- Being treated with compassion, dignity and respect.
- Being involved in decisions about their care.
- Knowing those around them and looking after them are well supported.
- Making choices in their daily life.
- Receiving good quality general health care.

The report also states that there must be improvements to quality and safety standards before better outcomes for individuals will be achieved.

Good communication underpins all these outcomes. Most people with learning disabilities have some speech, language and communication difficulties. These can be hidden or overlooked. Everyone needs to know what good communication support 'looks like' and what reasonable adjustments they can expect. Implementing good communication is proactive and ethical as it prevents reactive and unethical restrictive interventions, such as the abuse and punishment as occurred at Winterbourne View.

Failure to make reasonable adjustments to meet communication needs will mean people with learning disabilities will continue to be vulnerable to a range of risks. These risks include the continuing failure to design, commission and provide best-practice services, alongside continuing health inequalities faced by individuals, in contravention of legal responsibilities². To help providers of specialist hospital and residential services, the Royal College of Speech and Language Therapists (RCSLT) recommends five good practice standards around speech, language and communication.

¹Department of Health (2012) *Transforming Care: a National Response to Winterbourne View Hospital*.

About developing the five good communication standards

Following the Winterbourne View Review, the Department of Health developed a concordat³. As part of the Learning Disability Professional Senate⁴ the RCSLT was a signatory, committing to:

“Working together, with individuals and their families and with the groups that represent them, to deliver real change. Our shared objective is to see the health and care system get to grips with past failings by listening to this very vulnerable group of people and their families, meeting their needs and working together to commission the range of support which will enable them to lead fulfilling and safe lives in their communities”.

The concordat outlines a programme of action and as part of this the RCSLT has agreed to produce good practice standards for commissioners and providers. It will also promote the reasonable adjustments required to meet the speech, language and communication needs of people in specialist learning disability and/or autism hospital and residential settings. The development of these recommendations has been through the specialist RCSLT National Forum for Adults with Learning Disabilities (ALD). The project and editorial lead is Dr Della Money, as current RCSLT representative at the Learning Disability Professional Senate. The working party has been the RCSLT ALD Forum Steering Group:

- Dr Della Money, FRCSLT, RCSLT Adviser
Learning Disability Professional Senate Representative
- Ms Viki Baker, MRCSLT, Chair of the ALD Forum Steering Group
- Ms Jane Parr, MRCSLT, RCSLT Adviser
- Ms Elenor Birkett, MRCSLT
- Ms Louise Oldnall, MRCSLT
- Dr Clare Mander, MRCSLT

Consultation has taken place through:

- The ALD Forum Network, which links to regions and RCSLT Clinical Excellence Networks
- The Learning Disability Professional Senate, which includes members from the Inclusive Communication Working Party and the Nottinghamshire Healthcare NHS Trust Community of Interest

Status: The document went to the RCSLT Programme Board in June 2013 for advice, support and ratification, prior to being submitted to the Post Winterbourne View Implementation Programme Board on 19 November.

⁴ The Learning Disability Professional Senate includes the Royal College of Psychiatrists, the Royal College of Nursing, the British Psychological Society, the College of Occupational Therapists, the Royal College of General Practitioners, the College of Social Work, Chartered Society of Physiotherapy, and the Royal College of Speech and Language Therapists, together with representatives from other organisations including the Department of Health and National Family and Carer Forums.

Key recommendations

This paper introduces ‘five good communication standards’ for best practice. These will ensure reasonable adjustments are made to meet the speech, language and communication needs of individuals with learning disabilities or autism in specialist hospital and residential settings. These standards are drawn together using practitioner knowledge from expert speech and language therapists across England, Scotland and Wales, using the RCSLT’s specialist networks. Additional consultation took place via the national Learning Disability Professional Senate, which includes representation from professional bodies, families and carers, the Department of Health and other organisations.

The five good communication standards are intended as a practical resource to support families, carers, staff, professionals, providers and commissioners to make a difference to the lives of individuals using specialist residential services. As a result of these standards, all stakeholders should be able to know:

- What good communication looks like.
- Whether good communication is happening.
- About useful resources to promote good communication.

The five good communication standards:

Standard 1: There is a detailed description of how best to communicate with individuals.

Standard 2: Services demonstrate how they support individuals with communication needs to be involved with decisions about their care and their services.

Standard 3: Staff value and use competently the best approaches to communication with each individual they support.

Standard 4: Services create opportunities, relationships and environments that make individuals want to communicate.

Standard 5: Individuals are supported to understand and express their needs in relation to their health and wellbeing.

Standard 4: Services create opportunities, relationships and environments that make individuals want to communicate	17
Standard 5: Individuals are supported to understand and express their needs in relation to their health and wellbeing	20

Introduction

Communication is a significant risk factor contributing to increased mental health issues and behaviour described as challenging. This is because:

- Up to 90% of people with learning disabilities have communication difficulties.
- Around half have significant difficulties with both expressing themselves and understanding what others say.⁵
- Only 5 -10% of people with learning disabilities have recognised literacy skills and most are not be able to access standard written information.⁶
- The incidence of additional sensory impairments, including sight and hearing, is much greater than in the general population. Up to 40% of people with learning disabilities having a hearing loss that is often missed or undiagnosed.⁷
- People with autism have lifelong communication impairments around social communication, social interaction and social imagination.⁸
- As communication difficulties increase, behaviours that are considered challenging typically increase in frequency, intensity or duration.⁹

The individual risk of having a communication difficulty means individuals are misunderstood, experience failure and exclusion from events, activities and relationships. However, communication is also an environmental risk factor. Evidence shows staff do not generally interact with the people they support in a way that enables individuals to achieve greater levels of independence, participation or integration¹⁰. This indicates that providers of specialist hospital and residential services need to develop their expertise to provide meaningful interaction and good communication environments. Staff need the skills to make reasonable adjustments to maximise engagement, involvement and inclusion.

Good communication only exists as part of positive everyday relationships, boosting self-esteem and success. Good communication crosses all dimensions of care, support and enablement. Without good communication individuals struggle to learn, achieve, make friends and interact – all fundamental for citizenship and humanity and central to improving quality of life¹¹.

Without good communication people may be at risk of:

- A lack of choices and involvement in everyday decisions.
- Limited relationships.
- Increased vulnerability to abuse and hate crime.

- Low mood, anxiety and depression, and withdrawal from community life.
- Reduced employment and housing opportunities; increased placement breakdowns.
- Lower standard of healthcare, diagnostic overshadowing, and more inpatient admissions. Nursing staff unable to implement 8 Principles of Nursing Practice.¹²
- Over reliance by staff on restrictive approaches and interventions.
- Overuse of specialist learning disability services and 'out of county' placements.
- Increase use of behaviour which challenges, mental health distress or offending.
- Poor access to verbally-mediated therapeutic input focused on criminal offences.
- Staff teams consistently overestimating an individual's abilities, impacting negatively on staff perceptions and affecting the individual's overall care.
- Poor compliance with the legal requirements of the Mental Capacity Act¹³, Adults with Incapacity (Scotland) Act¹⁴, Human Rights Act¹⁵, Disability Discrimination Act¹⁶ and Equality Act¹⁷.

Good communication reduces these risks. It enables inclusive relationships, supporting individuals to have choice, control, greater independence and improved health outcomes. Sustainable improvements in communication can only be achieved through a 'whole systems approach' to reasonable adjustments, including:

- A range of learning opportunities for staff.
- Ongoing supervision that is psychologically minded and considers the staff's own thoughts about the individuals they work with and how this impacts on their relationship and the therapeutic environment.
- Access to resources, skills and knowledge to support communication.
- Effective communication strategies, guidelines and standards.
- Referral to specialist speech and language therapists for specific assessment and treatment.
- Broader access to multidisciplinary specialist services to empower and help providers of specialist hospital and residential services to communicate well across the whole system.

¹⁶ Disability Discrimination Act 1995 London: HMSO.

¹⁷ Equality Act 2010 London: HMSO.

Providers of specialist hospital and residential services need to evidence their whole systems approach to good communication. Good communication is all about inclusion: respecting the person and taking an individualised approach, whatever communication methods work best for an individual. Inclusive or total communication means sharing information in a way that everybody can understand¹⁸. It is about being aware and valuing all the different ways a person may use to communicate.

Good communication should support individuals to make and understand choices, express feelings and needs, and involve themselves in the world around them. Providers need to access and use a wide range of tools, techniques and technologies. The support needed will vary from person to person but the outcome for an individual should mean they can say:¹⁹

- Whatever communication methods work best for me are used and valued by others.
- People communicate effectively with me because of their underpinning knowledge, skills and attitude.
- People actively listen to me and take time to support my communication.
- I get the professional support I need to enable me to communicate to my full potential.
- The communication tools, techniques or technology I need is freely available to me throughout my life.
- Policies and strategies that affect me take into account my communication and include me in appropriate ways.

To achieve this, many people with learning disabilities or autism, with complex mental health conditions or behaviours described as challenging, are dependent on others for good communication. The RCSLT has identified five recommended 'Good communication standards' for providers of specialist hospital and residential services to meet the speech, language and communication needs of individuals. These standards provide a framework by which families, carers, friends, professionals and commissioners can know if a service has made reasonable adjustments to their communication practice. Each standard is clearly defined in terms of what the standard is, what good looks like and how others will know. Useful resources and references are also included.

¹⁹ Thurman S. (2009) *Communication is a basic human right*. BILD, Kidderminster.

Standard 1:

There is a detailed description of how best to communicate with individuals

In order to communicate effectively it is essential that everyone understands and values an individual's speech, language and communication needs. Individuals should be supported and involved, together with the people who know them best, to develop a rich description of the best ways to interact together. This description needs to be agreed, active, regularly updated and readily available. The description is sometimes referred to as a communication passport, guideline or profile. It includes the best ways of supporting their understanding and expression, the best methods of promoting interaction and involvement and describes 'how to be with someone'

What does good look like?

A clear description of an individual's communication should include information on:

- Understanding communication from others (such as hearing, concentration, memory, comprehension of words and sentences, understanding of contexts, routines and non-verbal language).
- Expressing communication to others (words and sentences, clarity of speech, use of signs, symbols and other visual resources, objects, facial expression and body language).
- Describing whether communication and behaviour is intentional.
- Taking part in communication with others (conversation skills, social skills, interactive skills) and understanding others intentions.
- The best times and people to communicate important information.
- What makes a good communication environment or context for the individual (noise, space, sensory information, access to areas).
- Other aspects that impact on communication for that individual.

The description should be easy to understand and clearly identify how communication partners need to adapt their communication to support the individual. It should provide clear examples. When communication needs are complex speech and language therapists should support the process. These descriptions are particularly important at times of transition to help individuals understand changes in their life.

How you will know you have achieved Standard 1?

1. Communication passports, profiles, dictionaries or guidelines are readily available for each individual.
2. Individuals and their families and friends are involved.
3. People who know the individual well can recognise their family member or friend through the description.
4. Staff can provide a thoughtful description of how they adapt their communication in line with the guidance.
5. Each individual's communication is responded to positively, as detailed in their description.
6. Communication needs are referenced across all care plans and in the day-to-day life and care of the individual.
7. Descriptions are individual, current and up to date.

Standard 2:

Services demonstrate how they support individuals with communication needs to be involved with decisions about their care and their services

Individuals with speech, language and communication needs are often either excluded from patient experience feedback processes or included in a tokenistic way. There is a risk that their needs and opinions are assumed, misinterpreted or ignored. All communication needs to be inclusive. For service providers, this means making sure they recognise that people understand and express themselves in different ways. For individuals this means getting information and expressing themselves in ways that meet their needs²⁰. Inclusive Communication is an approach that seeks to 'create a supportive and effective communication environment, using every available means of communication to understand and be understood'²¹. For services to demonstrate inclusion and involvement innovative and creative solutions to understanding the views of individuals are often required due to the nature of communication needs.

What does good look like?

Shared decision making should be evident in everyday decisions as well as more complex decisions about future interventions. A range of communication strategies are evidently used at each stage of the decision making process, in line with the statutory framework outlined in the Mental Capacity Act²². Decision makers seek support from others to ensure all practical steps are taken and to liaise with others to ensure a multi-agency/inter-agency best interest decision is taken.

Information is presented in a way that is easier for the person to understand (accessible information), more time is allowed, behaviour is recognised as an indication of how the person feels; different, and inclusive methods of communication are used. If someone is assessed as lacking capacity to make the main decision they are still be encouraged to contribute to the component aspects of the decision

For individuals to be able to give feedback on their experience of services, a range of communication options and strategies are available. These include the production and use of accessible information, signing, individualised techniques and observations. The views of individuals with complex communication needs are sought by building up an understanding of their likes and dislikes and reviewing their preferences over time.

Feedback is also sought from a range of proxies including family and friends, advocates, and professionals to build up a more complete picture of the individual's views and preferences. More specialist support from a third party such as speech and language therapy is sought where appropriate.

²⁰ Scottish Government. (2011) Principles of Inclusive Communication: An information and self- assessment tool for public authorities www.scotland.gov.uk

²¹ RCLT. (2003) Communicating Quality 3.

²² MCA Mental Capacity Act (2005) *Mental Capacity Act Code of Practice* (2007) and Scottish Government (2008) *Adults with incapacity (Scotland) Act 2000* Communication and Assessing capacity- a guide for social work and healthcare staff.

How you will know you have achieved Standard 2?

1. Staff demonstrate they understand how individuals show they like or dislike something, staff then build an individual's day around these preferences.
2. Staff understand how visual approaches as part of Inclusive Communication (for example, using signs, pictures, symbols or photos) can support decision making and involvement. They can give examples of how they are used.
3. 'Patient stories' have been used to informed service development.
4. There is evidence of a culture of asking opinions, acting on the feedback and changing accordingly. Individuals report they feel involved.
5. There is evidence of a culture of reflective practice, revising and reviewing how individuals are included and involved – what works and what doesn't.
6. Access to and use of PALS, complaints procedures and advocacy is clear and variety of support provided to ensure meaningful process. The individuals' family and friends are involved and appropriate accessible information is used.
7. A range of accessible resources are available that provide individualised information about a range of decisions – from daily menu choices through to information about specific interventions. The use of personalised accessible resources will be evident and not a “one size fits all” approach. Staff are able to explain how they use accessible resources and steps taken to enable individuals to understand them.
8. Capacity assessments are completed for each significant decision. Decision-makers ensure they take all practical steps as part of the capacity assessment. This includes documented evidence about whether the person understood information about the decision and the consequences, whether they were able to retain and weigh the information and how they communicated their decision.
9. When all practicable steps have been taken, if the person is assessed as lacking capacity then a full multidisciplinary and inter-agency best interest assessment will be completed. The best interest documentation should show how the person was encouraged to participate, how their wishes and feelings were established, the possible courses of action and likely outcomes.
10. Where individuals do not have capacity there is clear evidence that individuals are still encouraged to contribute to smaller aspects of the decision and every effort is made to ensure their views and preferences are fed into the decision making process.

Standard 3: Staff value and competently use the best approaches to communication with each individual they support

Staff working in specialist hospital and residential services must recognise communication difficulties. They must understand that they need to change their communication style to support the service user, and have the knowledge and skills to adapt their communication levels, styles and methods. Staff are aware of factors that impact on communication, especially hearing, sight and sensory integration. They understand that what they say and how they say it matters, and can impact positively or negatively on the individual. Staff also understand how good communication underpins informed consent and capacity. They are able to promote the individual's understanding and expression and create opportunities for positive communication.

What does good look like?

The Judith Trust²³ underlined the need for providers to promote:

- Staff who are people of goodwill and willing to learn.
- Manageable tasks, with clear indicators of success and a work/life balance.
- Recognition and appreciation for the efforts.
- A safe environment and culture of learning not blame.
- Sufficient training , supervision and monitoring.

As part of this, learning and development plans need to be in place to support staff to learn the appropriate communication skills. Competencies relating to communication must be embedded within a training and development framework, running from induction to specialist practice. Members of the workforce should be identified to act as communication champions.

Ongoing supervision is essential to support staff to adapt their communication and build up their understanding of the communication needs of the individuals they work with. Supervision must be embedded in psychologically-minded practice. This means staff are supported to be interested, and recognise their own feelings in relation to the individuals they work with and how they communicate with them. Staff know how they are with individuals, what they think about individuals and how they talk to individuals matters.

If both learning and development plus supervision that includes communication support are in place, staff working in specialist hospital and residential services will demonstrate their understanding of an individual's communication and sensory needs and adapt their communication accordingly. These adaptations could include simplification of language, use of a range of ways of communicating or observing and responding to the individual's behaviour. They will have opportunities throughout the individual's day to communicate together for a range of reasons, not just meeting their needs and wishes. Staff will have time for positive relationships.

²³ Stenfert Kroese B, Rose J (2011) *Mental health Services for Adults with Learning Disabilities*. The Judith Trust.

How you will know you have achieved Standard 3?

1. Individuals are supported by carers who speak their language in a way that they can understand.
2. A communication strategy for good communication is in place (across either an environment or an organisation). Staff are aware of the main goals and there is evidence of relevant visual communication strategies throughout the environment.
3. A learning and development framework, focusing on communication, exists and is evidenced through personal development plans and/or appraisals.
4. There is easy access to a variety of communication learning and development opportunities – from induction for all staff, to specialist training provided around individuals evidenced through healthcare records and staff portfolios.
5. Providers evidence time provided in induction and handover for all bank and new staff to learn about the communication needs of individuals they are expected to support.
6. Supervision evidences psychologically minded practice – reflecting both an attitude (interest) and a skill (ability for insight), directly linking between how people feel about the people they support and how this impacts on their communication.
7. Positive communication between staff and a variety of individuals is observed, including a 'positive attitude' to using augmentative communication strategies.
8. Staff have tools such as communication checklists or screening questionnaires and know when they need extra support around communication and sensory issues. Staff know how to access appropriate specialist speech and language therapy advice and make timely and appropriate referrals.
9. Staff demonstrate use of Inclusive Communication, appropriate to the needs of the individual they are supporting. They access and use appropriate communication support tools produce good information for individuals.
10. Staff know how to maintain any specialist equipment needed to support/enhance communication, along with appropriate and regular assessment for the best equipment for the individual. This will take into account their changing needs and developments in technology.
11. Staff use positive body language and facial expression, promoting dignity and respect.
12. Training and care plans around positive behaviour strategies recognise communication difficulties as a significant risk factor and include individualised and clear proactive and reactive communication strategies.

Standard 4:
Services create opportunities, relationships and environments that make individuals want to communicate

An understanding, welcoming and socially-rich environment is fundamental to relationships for all individuals, and particularly people with communication needs. Relationships are central to wellbeing. Getting the communication environment right will contribute to enabling people to live valued and meaningful lives. Individuals need to have the opportunity to communicate about all the things that all people talk about in everyday life such as dreams, hopes, fears, choices as well as everyday wants and needs.

Good communication needs to be considered broadly. It is about social interactions – greetings, sharing stories and fun. It is the quality of interaction that contributes to overall emotional and mental wellbeing; providing a sense of belonging, involvement and inclusion. Interaction may not necessarily involve speech. For someone without formal language, interactive approaches are a way of ‘being’ with another person, making meaningful contact with those who are hard to reach or easy to ignore. It may be about very basic early developmental interaction and communication and relationship building.

What does good look like?

Warm and genuine interactions, for social as well as functional reasons, are observed by staff, managers, professionals, families, friends and all visitors. People with a learning disability and those who support them relate to each other easily. Personalised communication strategies are part and parcel of the individual’s life.

The impact of sensory impairments as well as sensory processing or integration is recognised and acted upon to support individuals who find it difficult to process and act upon information received through their senses.

Interactive approaches are just one way of establishing and maintaining contact with people on their own terms and in a concrete way of showing respect and commitment to involving them as much as possible in controlling their own life.

How you will know you have achieved Standard 4?

1. On entering a specialist learning disability or autism settings you feel welcomed, understood and relaxed to be yourself.
2. There are visual communication supports in the environment that are clearly tailor-made to the people living there, for example, personalised visual timetables, staff photo rotas, individual mealtime mats, 'my life' books and the use of signing systems. A range of tools and a variety of media platforms to support individuals to manage worries and engage in a meaningful way are evident.
3. Staff are observed 'having a chat' with people who do not use formal language, using approaches such as Intensive Interaction. They are observed having fun.
4. Staff, professionals and visitors are observed interacting equally with everyone, including individuals who are hard to reach or easy to ignore.
5. There is a place for carers and people with a learning disability to discuss how they feel. This is supported by a range of communication tools.
6. When asked, staff can explain how they make the most of every opportunity to enable the individuals they support to express themselves and understand what is being said to them.
7. Staff are observed spending time with an individual for no purpose other than interaction and communication.
8. Staff create opportunities for interaction and involvement.
9. Staff are observed to use a social style of interaction which includes sharing, showing or commenting, not solely directing and questioning.

Standard 5:

Individuals are supported to understand and express their needs in relation to their health and wellbeing

People with learning disabilities face avoidable health inequalities. Limited communication and health literacy reduces capacity to convey health needs effectively to others²⁴. It is essential to consider communication needs in order to support individuals with their health. Arriving at a diagnosis can prove difficult if a person cannot describe signs and symptoms easily, or their behaviour is misunderstood and misconstrued. Staff need to be aware of how individuals communicate about their health and how they show that they are in pain. This includes considering ill health as a cause for changes in behaviour.

Knowing how much a person can understand is also essential in making a decision about their capacity to have a health treatment. It is also required to meet the principles of nursing practice that everyone can expect²⁵. This includes treating individuals with compassion and dignity and providing person-centred care.

What does good look like?

All people with a learning disability have an equal right to healthcare²⁶. Every step of the care pathway needs to be adjusted so people with autism or learning disabilities can receive equal treatment²⁷. Staff must plan reasonable adjustments before all appointments and discussions around health and wellbeing. Adjustments should include consideration around appointment times and duration, support required and ensuring the information provided about medication and other treatments is in a format that is relevant to the individual. Reasonable adjustments also include planning to maximise understanding by considering the communication environment and who gives information, when and where.

Staff should know about health passports, health action plans, hospital traffic lights or hospital passports and books. All these resources provide health or hospital staff with information (often colour coded) about the person during a health or hospital appointment or hospital stay. They all include information about an individual's communication, as well as care needs and any potential hazards, such as a risk of choking, known allergies and epilepsy.

People with learning disabilities may not express discomfort or pain in a way that health staff understand or recognise. Therefore, information about the individual should include details of how the person communicates pain and distress, and staff need to be trained to use this information and react appropriately. Staff also need to be aware of potential health risks and relevant referral pathways.

How you will know you have achieved Standard 5?

1. Health passports or similar tools are in place and used by staff.
2. There is evidence of use of capacity assessments and consent or best interest meetings regarding health assessment and treatment decisions .
3. There is evidence of staff considering communication needs in all documents around an individual's health.
4. Staff know how individuals express pain and discomfort and act accordingly.
5. Primary and secondary healthcare is able to meet needs without referral to specialist services.
6. It is usual practice for staff and healthcare professionals to consider reasonable adjustments in terms of appointment length and time, waiting, support staff and environments prior to all appointments and meetings.
7. There is accessible information about food choices, including accessible menus reflecting individuals' preferences and needs with evidence of involvement.
8. Accessible information is specifically tailored to meet the communication needs of individuals, explaining their health conditions and how to manage them.
9. If appropriate, good practice guidance on eating, drinking and/or swallowing (dysphagia) is readily available. This includes information on food and fluid consistencies and strategies required. Personal place mats are available with key information that others need to know to make mealtimes safe and enjoyable.
10. Staff understand why individuals have special dietary requirements, medications and interventions and their associated risks – such as food and drink that is either required or to be avoided, modified textures, sensory feedback issues.
